

METHOD, SYSTEM, AND PROGRAM FOR
MANAGING A MULTI-PAGE DOCUMENT

ABSTRACT

Provided is a method, system, and program for managing a multi-page document.

- 5 A plurality of input files are received including digital representations of multiple pages of a document. The content of each entire page is represented in a first representation format. The entire page content is capable of including content of a first content type and second content type. For each page of the document represented in the input files, a determination is made of regions in the page including content of the second content type. Each
- 10 determined region in the page is processed to generate the content for each region in a second representation format. The content of the entire page in the first representation format and the content of each region in the second representation format is added to at least one output file. The output file is then stored.
